DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 5 and 21-28 are, drawn to Operating with Other Appliance (e.g. TV, VCR, FAX, etc), classified in class 348, subclass 14.04.
- II. Claims 7 and 9-12 are, drawn to Computer Network Monitoring, classified in class 709, subclass 224.
- III. Claims 35-37 are, drawn to Measurement Systems in a Specific Environment, classified in class 702, subclass 1.

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable.

In the instant case, subcombination I has separate utility such as gleaning properties of smart TVs and not computers (e.g. storage devices and printers). See MPEP § 806.05(d).

In the instant case, subcombination II has separate utility such as inspecting computer properties using an extensible and non-procedural language with no function calls with variable arguments. See MPEP § 806.05(d).

In the instant case, subcombination III has separate utility such as determining an environment's thermal and acoustic properties. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
